

Jason T. Bolding, DDS.

Comprehensive Family Dentistry

We are now performing a more in depth oral cancer screening here at the office of Dr. Jason T. Bolding. The device used is called the VELSCOPE. It is the newest and best form of dental technology that can detect early stages of oral cancer. It is our responsibility as dental care providers to make sure that our patients are in good oral health. It is **STANDARD CARE** here. The VELSCOPE will be used at every recare visit.

There will be a once a year \$45 charge for this procedure. We do file this to the patients' insurance however we are finding that not all insurance companies are covering this expense. Patient will be responsible for this charge at the time of visit.

Thank you very much for your understanding.

GOD BLESS!
